

# Adobe Acrobat DC

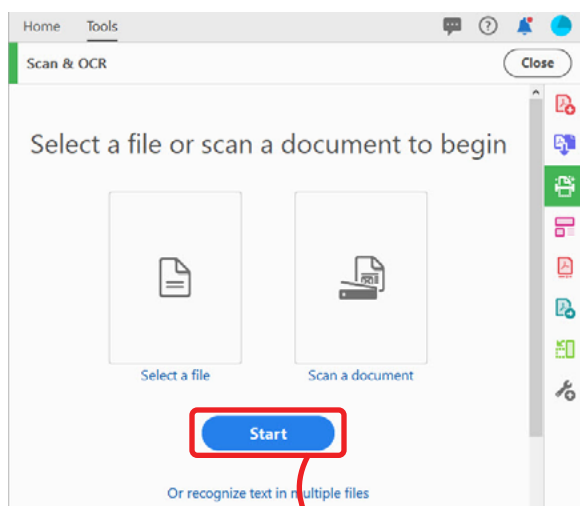

## Scan & OCR

Convert scans or images of documents into searchable, editable PDF files, and adjust the quality of the resulting file.

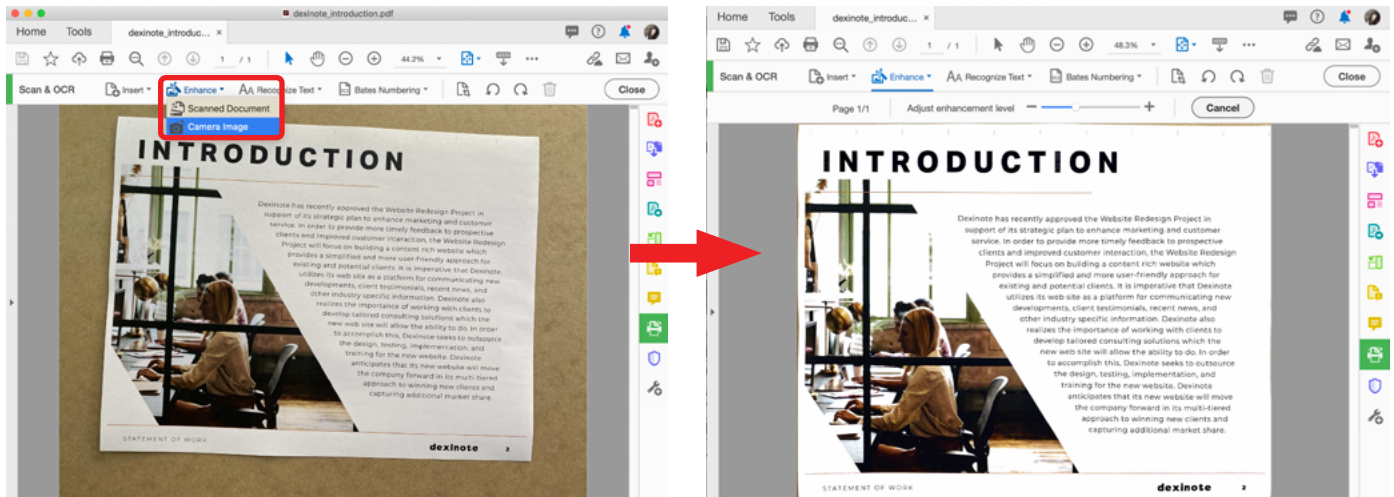

1. Select **Scan & OCR** from the Tools center or right-hand pane.

2. Select a file.  
This file could be a photo of a document, or an already scanned file created using a scanner or the Adobe Scan mobile app. Or, you can scan a document to create a new file using a connected scanner.

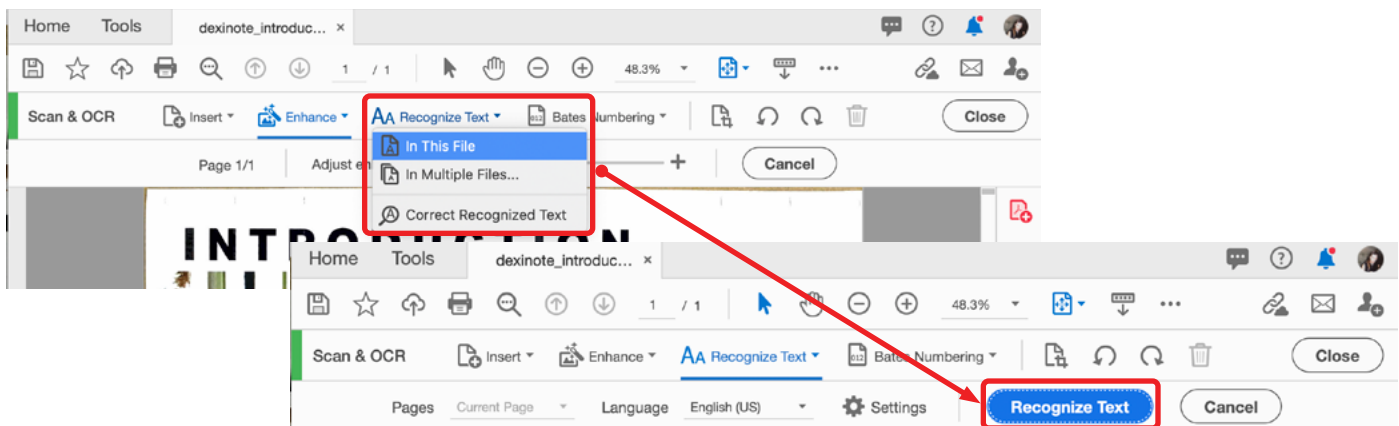

3. Choose **Scanned Document** or **Camera Image** to enhance the document.
4. Select **Enhance** to clean up the image.

Acrobat automatically recognizes text from scanned documents.

5. Select **Recognize Text** to manually recognize text on image files.

The file is now a searchable, editable PDF file.
